

PORTFOLIO REVIEW & IMPROVEMENT SUGGESTIONS

1. Positioning Issue: Your portfolio does not reflect your senior/tech lead experience. Update hero section to highlight 9+ years, system design, and large-scale systems.
2. Weak Project Presentation: Add detailed case studies with scale (1M+ products), tech stack, architecture, and measurable impact.
3. Missing System Design Proof: Include system design section with diagrams (search system, async processing, scaling).
4. Leadership Visibility: Show team leadership, ownership, and delivery responsibilities.
5. Generic UI: Reduce template feel. Focus on clean, content-heavy layout with case studies.
6. Skills Structuring: Group skills into Backend, Search, Infra, Architecture instead of flat listing.
7. No Scale Highlight: Add bold metrics like 1M+ products, high traffic systems, performance improvements.
8. Lack of Real Work Proof: Add live links, screenshots, or before/after comparisons.
9. No Clear Differentiation: Add section: 'What I Bring' (scaling, migrations, search expertise).
10. Weak Call-To-Action: Add strong CTA with contact, resume, and LinkedIn.

ADDITIONAL IMPROVEMENTS:

- Add blog/articles on system design or Elasticsearch
- Add GitHub featured projects with real complexity
- Improve SEO (title, meta, keywords)
- Optimize performance (Lighthouse score 90+)
- Make mobile UI extremely clean
- Add testimonials or endorsements
- Add downloadable resume button
